

# TRUNCATED-SQUARE CHOCONA

## Rules

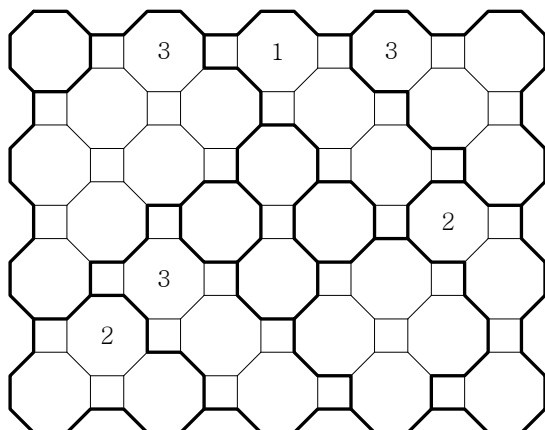

A field is divided into bold-outlined regions. Shade some cells such that:

1. A filled square may not share an edge with a filled octagon.
2. Filled octagons may share an edge, but only if the contiguous area of filled octagons forms a 45° oriented rectangle.
3. Each bold-outlined region must have at least one filled octagon.
4. Numbers indicate exactly how many cells, octagon or square, are filled in a bold-outlined region. Regions with no number can have any number of filled cells.
